

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

A Claim 1 (Currently Amended): A communication system including a part which communicates with a communication terminal, said communication system comprising:

a part ~~for receiving~~ configured to receive a call establishment request from said communication terminal, and ~~sending to send~~ <sup>caller</sup> to said communication terminal, a call forwarding destination information including ~~information on at least~~ a call forwarding destination; and

a part ~~for receiving~~ configured to receive information on a call forwarding destination which is selected by a caller from said communication terminal, and ~~allowing to allow~~ said communication terminal and said call forwarding destination to communicate with each other according to said information on said call forwarding destination; and

a part configured to establish a communication mode between said communication system and said communication terminal according to said information on said call forwarding destination, wherein

said communications mode comprises one of an email mode, a fax mode, and a chat mode.

Claim 2 (Cancelled).

Claim 3 (Currently Amended): The communication system as claimed in claim 1, further comprising:

a part ~~for sending~~ configured to send, to said communication terminal, information from which a caller selects a said communication mode ~~used for sending said call forwarding destination information to said communication terminal~~; and

a part ~~for establishing~~ configured to establish said communication mode selected by said caller between said communication system and said communication terminal, and sending said call forwarding destination information by said communication mode.

A Claim 4 (Currently Amended): A communication system including a part which communicates with a communication terminal, said communication system comprising:

a part ~~for receiving~~ configured to receive a call establishment request from said communication terminal, and ~~sending to send~~, to said communication terminal, a call forwarding destination information including information on at least a call forwarding destination;

a part ~~for receiving~~ configured to receive information on a call forwarding destination which is selected by a caller from said communication terminal;

a media conversion part ~~for performing~~ configured to perform media conversion between communication modes of said call forwarding destination and said communication terminal, said media conversion including one of voice-to-text conversion and text-to-voice conversion; and

a part ~~for allowing~~ configured to allow said communication terminal and said call forwarding destination to communicate with each other via said media conversion part.

Claim 5 (Currently Amended): The communication system as claimed in claim 4, further comprising:

a part ~~for sending~~ configured to send to said communication terminal information used for allowing a caller to select a said communication mode ~~to said communication terminal~~;

a part ~~for establishing~~ configured to establish said communication mode selected by said caller between said communication system and said communication terminal; ~~and,~~

A wherein said media conversion part performs media conversion between said communication mode selected by said caller and a communication mode of said call forwarding destination.

Claim 6 (Currently Amended): The communication system as claimed in claim 1, further comprising:

a part ~~for storing~~ configured to store said call forwarding destination information with information indicating whether call forwarding is available or not for each subscriber number; ~~and,~~

wherein said communication system sends said call forwarding destination information to said communication terminal when said call forwarding is available.

Claim 7 (Currently Amended): The communication system as claimed in claim 4, further comprising:

a part ~~for storing~~ configured to store said call forwarding destination information with information indicating whether call forwarding is available or not for each subscriber number; ~~and,~~

wherein said communication system sends said call forwarding destination information to said communication terminal when said call forwarding is available.

Claim 8 (Currently Amended): The communication system as claimed in claim 1,  
wherein

said call forwarding destination information includes state information indicating  
whether call forwarding is available or not for each call forwarding destination, and

A  
said communication system ~~sends~~ is configured to send information on call  
forwarding destinations in which said state information indicates that call forwarding is  
available as said call forwarding destination information.

Claim 9 (Currently Amended): The communication system as claimed in claim 4,  
wherein

said call forwarding destination information includes state information indicating  
whether call forwarding is available or not for each call forwarding destination, and

said communication system ~~sends~~ is configured to send information on call  
forwarding destinations in which said state information indicates that call forwarding is  
available as said call forwarding destination information.

Claim 10 (Currently Amended): A communication method used for carrying out call  
forwarding by a communication system, comprising the steps of:

receiving a call establishment request from a communication terminal, ~~and;~~

sending, to said communication terminal, a call forwarding destination information  
including information on at least a call forwarding destination; ~~and~~

receiving information on a call forwarding destination which is selected by a caller  
from said communication terminal, and allowing said communication terminal and said call  
forwarding destination to communicate with each other according to said information on said  
call forwarding destination; and;

establishing a communication mode between said communication system and said communication terminal according to said information on said call forwarding destination, wherein

said communications mode comprises one of an email mode, a fax mode, and a chat mode.

A  
Claim 11 (Cancelled).

Claim 12 (Original): The communication method as claimed in claim 10, further comprising the steps of:

sending, to said communication terminal, information from which a caller selects a communication mode used for sending said call forwarding destination information to said communication terminal; and

establishing said communication mode selected by said caller between said communication system and said communication terminal, and sending said call forwarding destination information by said communication mode.

Claim 13 (Currently Amended): A communication method used for carrying out call forwarding by a communication system, comprising the steps of:

receiving a call establishment request from a communication terminal, ~~and;~~

sending, to said communication terminal, a call forwarding destination information including information on at least a call forwarding destination;

receiving information on a call forwarding destination which is selected by a caller from said communication terminal;

performing media conversion between communication modes of said call forwarding destination and said communication terminal; and

allowing said communication terminal and said call forwarding destination to communicate with each other by performing media conversion, wherein

said media conversion includes voice-to-text conversion and text-to-voice conversion.

A  
Claim 14 (Currently Amended): The communication method as claimed in claim 13, further comprising the steps of:

sending information used for allowing a caller to select a communication mode to said communication terminal;

establishing said communication mode selected by said caller between said communication system and said communication terminal; and

~~wherein performing media conversion is performed~~ between said communication mode selected by said caller and a communication mode of said call forwarding destination.

Claim 15 (Currently Amended): The communication method as claimed in claim 10, further comprising the steps of:

storing said call forwarding destination information with information indicating whether call forwarding is available or not for each subscriber number in said communication system; and

~~wherein sending said call forwarding destination information by~~ said communication system sends ~~said call forwarding destination information~~ to said communication terminal when said call forwarding is available.

Claim 16 (Currently Amended): The communication method as claimed in claim 13, further comprising the steps of:

storing said call forwarding destination information with information indicating whether call forwarding is available or not for each subscriber number in said communication system; and

A ~~wherein sending said call forwarding destination information by~~ said communication system sends ~~said call forwarding destination information~~ to said communication terminal when said call forwarding is available.

Claim 17 (Currently Amended): The communication method as claimed in claim 10, wherein

said step of sending call forwarding destination information includes sending state information indicating whether call forwarding is available or not for each call forwarding destination, and the method further comprises

~~said communication system sends~~ sending, by said communication system, information on call forwarding destinations in which said state information indicates that call forwarding is available as said call forwarding destination information.

Claim 18 (Currently Amended): The communication method as claimed in claim 13, wherein

said step of sending call forwarding destination information includes sending state information indicating whether call forwarding is available or not for each call forwarding destination, and the method further comprises

sending, by said communication system, said communication system sends

A information on call forwarding destinations in which said state information indicates that call forwarding is available as said call forwarding destination information.
